

Vision Engraving & Routing Systems Introduces VisionU Training Program

From the innovative people who brought you InstaVision an industry first for live on line demos, Vision Engraving and Routing Systems unveils their new training program VisionU (University)! For those who want to learn how to proficiently operate a Vision engraving or routing machine, VisionU conveniently offers training on line, on campus or on site. Individuals or groups of all skill levels worldwide, now have the opportunity to learn from the largest engraving and CNC routing manufacturer in the USA.

Manufacturing for over 30 years, Vision has acquired a vast knowledge base while building quality machines and providing an unsurpassed level of support for its many customers around the world. VisionU allows you to tap into this knowledge base, learning live and direct from the experts on a complete spectrum of applications.

If you're a beginner you can learn core basics of proficient machine and software operation, developing a solid foundation you can build on. If you're a seasoned user, you can expand your level of expertise to generate another source of revenue for higher profits. You can learn advanced or specific applications such as ADA Braille signs, In-Lays, working with round or cylindrical shape items, glass engraving, ring and jewelry engraving, auto serialization for large run projects and so much more!

VisionU's professional instructors have extensive knowledge of Vision software and machines. They can show you how to apply this knowledge to YOUR real world challenges for YOUR real world solutions. Furthermore, VisionU is based at Vision Engraving & Routing Systems manufacturing building in Phoenix AZ. Having VisionU in the same facility allows instructors to leverage a vast amount of resources for your training. Direct access to engineers, machine designers, technical support reps, machine parts, and more gives VisionU's training program an edge over similar curriculums.
