VISION ENGRAVING & ROUTING SYSTEMS ANNOUNCES NEW WEBSITE

(Phoenix, AZ) -- Vision Engraving & Routing Systems is pleased to announce the launch of a new website dedicated specifically to the company's CNC routing machines. The site, www.visionrouters.com, highlights the company's heavy-duty 25 Series and large-format routers, software, and accessories, and offers a variety of project application images and videos.

Vision's 25 Series offers table sizes of 25" x 25" and 25" x 50", while the large-format series offers work areas starting at 4' x 8'. These routers can produce accurate, repeatable, cost-effective work using just one machine instead of several. With both routing and engraving head options, these systems feature an aluminum t-slot or vacuum table, state-of-the-art Vision Series 3 Controller, and the company's graphically-advanced Vision Pro 8 software with an ethernet interface. Options for these systems include an automatic Raster™ Braille inserter and Vision's new DACS (Digitally Aligned Cutting System), an alignment tool which provides fast, perfect print-to-cut registration for graphics. Applications for these machines include cutout letters, inlays, and ADA and 2.5-D and 3D signs; cabinets, furniture, and other woodworking projects; control panels; and plastic and metal fabrication and machining.

For more information, please contact the Vision sales office at (888) 637-1737 or visit online at www.visionrouters.com.
