CNC ROUTER MANUFACTURER, VISION ENGRAVING & ROUTING SYSTEMS, ANNOUNCES PARTNERSHIP WITH UNIST, INC.

Provides Environmentally-Friendly Lubrication For CNC Metalworking, Cutting

(Phoenix, AZ) – CNC router manufacturer, Vision Engraving & Routing Systems, is pleased to announce a new partnership with Unist, Inc., a leading designer and manufacturer of cutting tool lubrication systems and components for industrial cutting. Vision will now offer Unist systems as an option for their CNC routing systems, making metalworking and cutting projects easier and more cost-efficient.

By applying extremely small amounts of a high-quality lubricant, the Unist systems significantly reduce the cost and volume of cutting fluid used in metal cutting, forming, and stamping operations. Applying a vegetable-based, biodegradable lubricant in controlled amounts will reduce wear and tear of cutting tools during machining operations.

“We are extremely pleased to announce this partnership with Unist,” said Joe Ivanenok, President of Vision Engraving & Routing Systems, a leading CNC router manufacturer. “For customers who use our CNC routers for metalworking, cutting, and other industrial applications, these lubrication systems will increase efficiency and reduce cost. We’re also proud to be working with Unist to provide a ‘green’ solution for our customers.”

For more information about CNC routers, please contact the Vision sales office at (888) 637-1737 or visit online at www.visionengravers.com. To learn more about Unist lubrication systems, please visit www.unist.com.
